### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Graham S. Jones, II, on 7 October 2009.

2. The application has been amended as follows:

Claim 24 should read,

"A hardware computer system having a pipelined processor, comprising:

a comparator for comparing a Branch Target Buffer (BTB) table with a recent entry queue with said recent entry queue comprising a set of BTB table entries logically positioned in parallel with said BTB table;

said computer organizing said recent entry queue as a FIFO queue wherein when a previously presented entry is placed into said recent entry queue, an oldest entry therein is moved out to make room for said previously presented entry;

said BTB table being organized into multi-associative classes and said recent entry queue being associative;

said recent entry queue being logically defined as a subset of entries in said BTB table and coupled to track a last number of branches entered into said BTB table;

comparing each previously presented entry to most recent entries into said recent entry queue; and

said recent entry queue blocking duplicate entries from being installed into said BTB table and into said recent entry queue by examining the contents of said recent entry queue for duplicate entries prior to a write into said BTB table and said recent entry queue and in addition allowing a decode to be delayed by a defined number of clock cycles such that a branch of interest can be delayed from decoding in order to allow a given entry in said BTB table to be detected in time for future decoding of said branch of interest.”

Claim 28 should read,

“A program product comprising a computer usable medium having computer readable code thereon for controlling and configuring a computer, having a pipelined processor and a Branch Target Buffer (BTB) table, to:

create a recent entry queue; said recent entry queue comprising a set of BTB table entries logically positioned in parallel with said BTB table;

organizing said recent entry queue as a FIFO queue wherein when a previously presented entry is placed into said recent entry queue, an oldest entry therein is moved out to make room for said previously presented entry;

organizing said BTB table into a plurality of associative classes and said recent entry queue being associative;

defining said recent entry queue being logically defined as a subset of said BTB table and coupled to track a last number of branches entered into said BTB table;

comparing each previously presented entry to most recent entries into said recent entry queue;

blocking duplicate entries from being installed into said BTB table and said recent entry queue by examining contents of said recent entry queue for such duplicate entries prior to a write into said BTB table and said recent entry queue and in addition allowing a decode to be delayed by a defined number of cycles such that a branch of interest can be delayed from decoding in order to allow a given entry in said BTB table to be detected in time for future decoding of said branch of interest."

3. The objection to the specification, and the rejection of claims 24 and 27 under 35 U.S.C. 101, has been withdrawn due to the amendments given above. In addition, the examiner has interpreted the term "computer usable medium", based on paragraph [0040] of the specification, to be directed only to physical, statutory embodiments of such a medium. Thus, the examiner has interpreted that the medium does not include transmission/carrier waves, or other non-statutory embodiments, etc.

4. The following is an examiner's statement of reasons for allowance: the prior art on record does not teach using a FIFO recent entry queue organized with the BTB in the way described in the claims, and configured to block duplicate entries and to delay

decode by a number of cycles so that a branch of interest can be delayed to allow the entry in the BTB to be detected, in combination with the remaining claim limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. For the reasons given above, claims 1, 8-14, 21-24, 27, 28, 31, 40, 41 and 47-59 are allowed.

### ***Conclusion***
